

Light traceability solution

> What for

Mainly for SMEs, a deployment of traceability in a close loop approach by "Light traceability solution" for logs will enable a first step of gains both on short term (through procurement decision making) and on the long term (through production monitoring) accessible by the IAD collection of a traceability on logs.

> What is included

This light traceability solution integrates:

- Light IK Infrastructure (including the DATABASE and exploitation software) LTDES
- Marking and Reading devices embedding the IK adaptor software
- MHS (Message Handling System) Light solution as the Mauchamp SAS proposed one.

Since these elements follow the standardized integration approach specified in the IK project, further interoperability to connect up and down stream to the other supply chain partners is guaranteed. This represents a competitive advantage in comparison to any other isolated offering.
