

## ••• Successful implementation of a traceability solution in your business

Introduction into wood traceability techniques and components by Indisputable Key experts who participated in their development

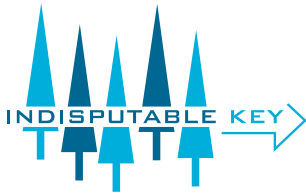

### › Training for the whole wood supply chain stakeholders

- Forest companies procuring wood to the supply chain
- 1st manufacturing companies
- 2nd manufacturing companies

### › You want to know

- Which identification technologies would be available to trace your products
- Which IT modules meet data exchange requirements in the forest-based sector
- What kind of tools are used to optimise business relationships within the wood supply chain

## › Description of our training program

The sessions will present the material and logical solutions available in the forest-based industry to trace wood in different business scenarios: internal traceability of the raw material throughout a company's process, wood traceability involving multiple industrial users (BtoB or NtoN). Participants will learn about the organisation of traceability deployment to achieve successful integration in the company's production environment.

## › Benefits for the company:

- Identify the technologies which could fit to your business model
- Understand the flexibility of traceability solutions and their contribution to business cases achievement
- Learn from the technical expertise of the Indisputable Key partners
