

What to trace and track for benefits to my business

Definition of economical and environmental Key Performance Indicators

› For all wood supply chain stakeholders

- Forest companies procuring wood to the supply chain
- 1st manufacturing companies
- 2nd manufacturing companies

› You want to know

- The current condition of your production unit with respect to economical and/or environmental performance
- What to follow-up in order to establish Key Performance Indicators
- What parts in your production chain that needs attention for improvement

› Key Performance Indicators (KPI)

- Economical KPIs are established as a result of an economical inventory of the production unit and the performance of the products manufactured
- Environmental KPIs are established as a result of an environmental inventory of the production unit and up-stream processes, performed in accordance with the life cycle assessment (LCA) framework standard ISO 14044

› Definition of economical and environmental Key Performance Indicators

Service is offered by Indisputable Key experts to conduct a thorough economical and/or environmental inventory of your production unit. The experts will use the inventory result to establish a qualified set of Key Performance Indicators (KPI) that you can use to monitor the current condition of your production as basis for actions and market communication. The KPI can be used by you to e.g. measure progress on stipulated production improvements over time. In discussions with our experts you will learn all about how to update the KPI with the latest information in order to see the current status of your production unit. Based on the inventory result, our experts will also help you to identify the "hot spots" in your production, i.e. in which parts to focus your improvements in order to increase your economical and/or environmental performance. The environmental KPIs can easily be transformed to a climate declaration or environmental product declaration (EPD) and utilised for market communication purposes.

› Benefits for the company:

- Definition of KPIs for a comprehensible view of production performance
- Knowledge on how to monitor the production and the performance of the products manufactured using KPI
- Identify the parts in the production chain that are most urgent to improve for overall increased economical and/or environmental performance
